

## Color Chart

### WB EPOXY

Available in **Clear** and in the following colors:

WHITE\*

BLACK

MEDIUM GRAY

LIGHT GRAY

TAN

### BEST PRACTICES

- **Appearance:** Colors are approximate. Final look may vary based on product, substrate, mix ratio, technique, climate, and location.
- **Batching:** Use the same batch number for consistent color. If batches differ, mix them together until the color is uniform.
- **Testing:** Always test material in the application area before starting full installation.
- **Mixing:** Thoroughly mix Part A until color is uniform before combining with other components. If adding colorant, mix color with Clear Part A until uniform before combining.
- **Light colors (marked with \*):** May require two coats at thin mil thickness to achieve full hide.
- **Prime and base coats:** Choose colors that match or support the final look, as they may affect the appearance or coverage requirements of the top coat.
- **UV resistance:** All epoxy will amber over time. For better color stability, use a UV-resistant coating such as Polyaspartic or Polyurethane.
- **For custom color:** Complete the Special Order Form ([kretus.com/special-order-form](https://kretus.com/special-order-form)). Additional fees and lead times apply.
